

New! KeyWarden

KEYLOCKER

LOCK UP THE KEYS!

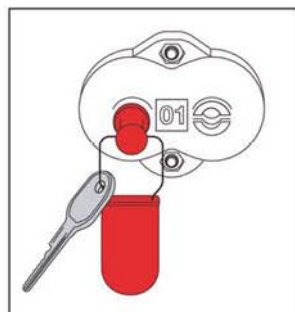

Effective, Affordable Key Control

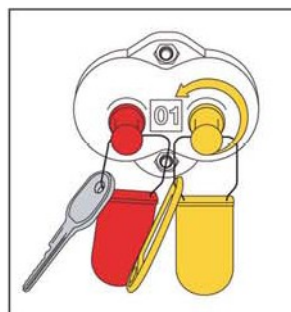

KeyWarden introduces the **KeyLocker** the easy-to-use, effective system for managing key use.

A tamper-proof locking plastic padlock secures the key to each red peg. Authorized users “check out” a key by inserting their personalized access peg into the adjacent user port and making a one-quarter turn. The requested key is released and the user’s access peg, with their identification keys is locked into that spot. With a glance you will know who has which keys.

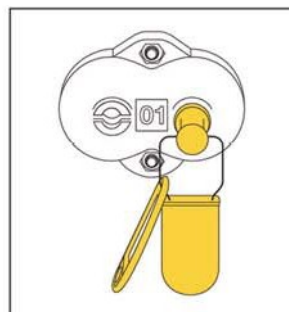

You cannot manage what you do not control!

1. Locate key
Use numbered ports to find a specific key.

2. Insert access peg
In right port of key location, turn yellow access peg counter clockwise to release key.

3. Remove key
Personalized access peg will remain in KeyLocker until key is returned.
